

Wearable Scanner User's Manual

V1.0

Introduction

This scanner includes wireless 2.4G, wireless Bluetooth and Type-C transmission modes, these transmission modes can be switched any time.

When the scanner turns on, it will automatically enter the interface detection status, if the Type-C cable is connected and recognized, the scanner will enter the wired transmission mode, otherwise it will enter wireless transmission mode.

▼ Pair Method

Pair setting

1.2.4G Receiver mode:

First scan the "2.4G mode" code, then scan the "pairing setting" code, enter the pairing state (the blue light flashes quickly at this time), insert the receiver, and hear a "Di" voice, the pairing is successful, and the blue light is off. (The pairing time is about 1 minute, and it will automatically exit if the pairing fails over time).

2. Bluetooth pairing (two pairing methods):

Scan code pairing:

1) scan the "Bluetooth HID" code, then scan the "Pairing"Set" code to enter the Bluetooth search (the blue light flashes rapidly at this time);

2) Turn on Bluetooth in the device, find the "Barcode Scanner HID" and click pairing, the pairing is successful "Di" One sound, the blue light goes out. (Note: the pairing time is approximately After about 1 minutes, if the pairing is not successful after timeout, it will automatically exit).

NFC pairing:

1) Turn on the NFC function in the device and enter the Blue-tooth search interface, place the NFC sensor surface of the scanner close to the NFC induction area, the induction successfully enters the Bluetooth search (The blue light flashes rapidly at this time).

2) In the device Bluetooth search to find "Barcode Scanner HID" and click pairing, the pairing is successful "Di" one sound, the blue light goes out. (Note: the pairing time is approximately After about 1 minutes, if the pairing is not successful after timeout, it will automatically exit).

▼ Inventory Mode

The scanner exceeds the transmission distance, we suggest to use inventory mode.

The scanner data is storied directly in the memory. If the memory is full, three alarms will be sounds, and blue light will flash 3 times.

Memory mode

Upload data

Note: upload all data, means that upload all data in storage.

Upload statistics

Note: upload statistics, can see barcode total amount in storage.

▼ Immediate Mode

In immediate mode, after the wire or wireless transmission is successful, the scanner emits a short sound and the blue light flashes once.

The scanner exceeds the transmission distance or send data fails, all data will be lost, at the same time, sound 3 times alarm prompt continuously and blue light flashes 3 times.
